

The leader in animal improvement projects

HOME

Nkunzi Genetics (Pty) Ltd originated from the identified need for AI services, as well as DIY training, together with the development of AI Programmes.

Nkunzi Genetics is a Livestock Improvement Company, formed to help farmers become more efficient and profitable by genetically improving their animals and by providing information systems and technology that makes it easier to farm with livestock.

There are approximately 10 000 beef and 5 000 dairy herds in South Africa, ranging from small development farmers to highly sophisticated beef and dairy herds. Nkunzi Genetics will largely focus on the development farmers.

Nkunzi Genetics will work closely with Agricultural Departments in assisting development farmers.

ABOUT US

Joel Nkuna, who is heading the company, has vast experience in farm worker AI training and the organization of AI programmes. With the support of experienced administrative personnel, Joel will be able to cover a large area of South Africa.

Artificial Insemination (AI) is a technique in which semen is collected from the male, evaluated, preserved, stored and inseminated manually to the female.

OUR MISSION

To be an essential partner on farm and in supply chains through a diverse range of products and services. Enhancing the productivity of Dairy and Beef producers and ensuring that 90% of South African Emerging Livestock farmers is utilizing Artificial Insemination.

NKUNZI GENETICS SOUTH AFRICA

In conjunction with all South African semen suppliers, Nkunzi Genetics will be looking to broaden the services of AI, together with DIY training in South Africa. Semen supplies will come directly from approved AI Stations and Stud Breeders with Nkunzi Genetics providing the service.
